The Hall with man that attach

I claim:

- 1. A watch case comprising a circular watch body formed with two opposite pairs of mutually parallel transversely spaced lugs lying along secants to said body, each of said lugs having radiused free ends lying along circular arc segments concentric with said body, said body having toroidal segments between said pairs of lugs and between the lugs of each pair, said body being curved in a longitudinal median plane between the lugs of said pairs so as to have a concave curvature on a bottom side of said body adapted to conform to a wrist of a wearer and a convex curvature on a top of said body, said top of said body receiving an outwardly convex crystal conforming to a segment of a sphere and flush along an edge of said crystal with a circular frame formed on said body and merging continuously into upper surfaces of said lugs.
- 2. The watch case defined in claim 1, further
 comprising a crown projecting laterally from one of said toroidal
 segments centrally thereof.
